

Numpad Exercise

Problem

You have been tasked with implementing a number pad for a touch screen device (such as an iPad). A user can enter a quantity via a series of static numerical buttons.

Use Cases

The number pad should be able to support the following use cases:

- Setting an optional maximum number
 - When the max is hit, the numerical keys should be disabled
- Support an optional initial value
- Optional minimum that disables the acceptance key until it is met
